## **DETAILED ACTION**

### ***Information Disclosure Statement***

The information disclosure statement (IDS) submitted on 06/29/07 is in compliance with the provisions of 37 CFR 1.97. Accordingly, the information disclosure statement is being considered by the examiner.

### ***Response to Arguments***

Applicant's arguments filed 04/26/07 have been fully considered but they are not persuasive.

The Examiner maintains the previous rejection and maintains the same point of view regarding the interpretation of the claims.

After a careful examination of the method claims, the Examiner believes that the steps of treating a patient with heart failure are clearly disclosed in the Van Tassel et al reference, the Examiner believes that the reference still read on the rejected claims. For example, the prior art all the structure limitations and the method of treating a patient with heart failure. For the above reasons the examiner rejected the rest of the claims.

### ***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 47-51, 62-66 and 72 are rejected under 35 U.S.C. 102(e) as being anticipated by Van Tassel et al US Patent 6,652,555 B1.

Van Tassel et al discloses an inflatable partitioning element (see the whole device in Fig. 14) for treating heart failure having an outer periphery, a hollow interior ((see Fig. 15) containing an inflation fluid (see Figs. 17 & 18), an inflation port (see Fig. 15) communicating with the hollow interior, a hub (408), a supporting element (404), at least one anchoring element (the anchor can be the outer surface of element 402 and/or element 40) and a valve (426).
